New Filler Head features “No Drips, No Runs, No Errors”

CLARKSVILLE, IN — [Apple Food Systems](#) has recently designed and installed new self-clearing heads on a six across depositing (filler) system which will produce 240 flatbreads per minute. Food Industry manufacturers who produce flat breads or pizza will appreciate the ability to produce a tight and accurate weight deposit configured in a specific and totally designable pattern. The new head design provides an even coverage of sauces, including those with particulate matter such as onions and tomatoes, with every deposit — a need for which there have been no viable solutions until now.

The new six across depositing (filler) system utilizes approximately ten square feet of factory space, offering the customer a great deal of options to make use of the remaining space for other applications. Apple Food Systems has the ability to build this same system for pizzas of any size, whether round, square or rectangular. According to Sales Director, Ed Gill, Apple Food Systems is currently manufacturing demo samples of the nozzles in several sizes and shapes to show potential customers at the customers’ sites using the demonstrator [MR900](#) stand alone depositor. “Although the demo unit is configured as a single lane, the mechanics and function are the same,” says Gill, “so that multiple lanes can be accommodated through several applications, depending only on the customer’s needs and existing conveyor systems.”

The depositing system provides accurate deposits for customers requiring very tight tolerances, and with a minimization of waste, enables a swift ROI. The system design also provides for precise deposits with little to no edge contamination to ensure proper sealing. Apple Food Systems is pleased to bring solutions such as the new self-clearing head design to the market which fulfill unmet needs and exceed customer expectations. “We are going to become the Krylon™ of the depositing market,” remarks Ed Gill, “that is, as Johnny Bench used to say...’No drips, no runs, no errors.’”

Apple Food Systems will be an exhibitor during this year’s [2009 PROCESS EXPO](#), being held October 5th-7th, 2009 in Las Vegas, Nevada, USA. Process Expo provides the newest developments in food processing technology to meet the challenges faced by the industry’s food and beverage manufacturers. Apple Food Systems brings a proven technology to the Americas which the world has known and trusted for many years. The unveiling of Apple Food Systems at the 2009 PROCESS EXPO in Las Vegas is an opportunity for Apple to demonstrate their eagerness and expertise in bringing solutions to the challenges faced by today’s food manufacturers.
