FOR IMMEDIATE RELEASE: September 15, 2009

## Public Unveiling of Apple Food Systems at the 2009 Process Expo

CLARKSVILLE, IN — [Apple Food Systems](#) will be making their inaugural public debut to the Food Industry during this year's PROCESS EXPO, being held October 5th-7th, 2009 in Las Vegas, Nevada, USA. Process Expo provides the newest developments in food processing technology to meet the challenges faced by the industry's food and beverage manufacturers. The expo draws buyers representing every market segment of the food industry from the U.S. and more than 75 countries; and this year Apple Food Systems will be manning [Booth #6937](#) in the Upper South Hall of the Las Vegas Convention Center. Apple Food Systems presents to the North, Central, and South American Food, Bakery and Confectionery Industries established products directly tested and proven throughout the rest of the world.

Apple Food Systems, launched in January 2009, is the joint venture of Apple International Ltd. of Hull, England and pāco manufacturing® of Clarksville, Indiana, USA. For over 20 years, Apple International has been designing, developing and manufacturing fully automated systems and turnkey operations for the food industry in the UK, the Philippines, Sweden, Germany, Asia and the United States. Through this partnership, Apple International will expand its manufacturing operations to the Continent of the Americas (North, Central & South America) as it teams up with over 55 years of manufacturing and technical expertise, quality and service provided by pāco manufacturing®.

Recent accomplishments in the U.S. include [a new self-clearing head design](#) of Apple's for a borderless pizza system. Apple Food Systems just installed a six across depositor system producing 240 flatbreads per minute, utilizing only around ten square feet of factory space. The new head provides an even coverage of sauces, including those with particulate matter such as onions and tomatoes, with a tight and accurate weight deposit in a specific and totally designable pattern. According to Sales Director, Ed Gill, Apple Food Systems provides accurate deposits with little or no edge contamination to ensure proper sealing. "We are going to become the Krylon™ of the depositing market," says Gill, "that is, as Johnny Bench used to say, 'No drips, no runs, no errors.'"

President Glen Morris recapped by saying that, although Apple Food Systems is a newly formed partnership, "It brings a proven technology to the Americas which the rest of the world has known and trusted for many years." The unveiling of Apple Food Systems at the 2009 Process Expo in Las Vegas is an opportunity for Apple to demonstrate their eagerness and expertise in bringing solutions to the challenges faced by today's food manufacturers.
